

FREE Mapping Assistance

FREE GPS Loaner Program

FREE ASSISTANCE from EPA with mapping and asset management.

EPA's GPS Loaner Program allows you to borrow a handheld GPS for FREE for your project.

Use the GPS and free mapping assistance to:

- Create maps of your collection or distribution system
- Create a database to manage your assets

Feature	Value
Manholes	
Name	MH26
(Derived)	
(Actions)	
X	-74.848049279999...
Y	40.164626120000001
ID	Wpt 026
Name	MH26
Depth	15
Material	Concrete
Condition	2
Inspection Date	2015

FREE Mapping Assistance

FREE GPS Loaner Program

This program offers free GIS mapping assistance for water utilities, such as drinking water, wastewater, and stormwater. These services will help you visually and electronically track

- Underground infrastructure or assets
- Asset information (date installed, size, material, condition, recent inspection notes, etc.)
- Asset condition used for annual budgeting

There are many free Geographic Information System, or GIS, softwares that can be found online. The data obtained from the borrowed GPS can be inputted directly into GIS, enabling the user to visualize the utility's assets and create a map with a few simple steps. Asset information can also be incorporated into existing maps by adding them as separate tables and joining them to the map.

EPA is able to assist in this process and can also provide training to ensure that utility maps continue to be updated and maintained. Asset management continues to be a priority for EPA as it helps utilities to save time, money, and prepare for unexpected maintenance problems.
